Characterization of PSB's from Rhizospheric Soil

By Lochan Singh

LAP Lambert Academic Publishing Sep 2012, 2012.

Taschenbuch. Book Condition: Neu. 220x150x7 mm. This item is printed on demand - Print on Demand Neuware - Seven phosphate solubilising bacteria, belonging to Enterobacteriaceae family, capable of utilizing Xylose and rock phosphate as the sole carbon and phosphate source were isolated by enrichment culture method. This PSB exhibited mineral phosphate solubilising (MPS) phenotype on xylose and glucose, which are substrates for enzyme glucose dehydrogenase (GDH), as carbon sources. The isolates secreted formic acid and xylonic acid by utilizing xylose. In all the isolates, GDH activity was found when grown on Glucose and Xylose, indicating that it is constitutive and could act on a wide range of aldose sugars. PFL enzyme activity in all xylose utilizing cells was higher, since PFL is a marker of anaerobic conditions thus all the isolates were facultative anaerobes. Efficiency of the isolates for phosphorus solubilization in natural environments was further confirmed by pot experiments on mung bean plants. 112 pp. Englisch.

Reviews

It in a single of my personal favorite pdf. It really is writer in basic words instead of hard to understand. Your daily life period will be transform as soon as you complete looking over this pdf.

-- Vena Sauer DDS

Good e-book and beneficial one. I was able to comprehended everything out of this published e pdf. Once you begin to read the book, it is extremely difficult to leave it before concluding.
